

## Science and Society - Humanities and Sciences in Current Interpretation By People's Science Movement (India)

### I. Science and Proofs - Physics, Biology and Mathematics - Classifying their Relevance and Importance

One can interpret science to mean - that pure world and pure life exists and even everything is scientific and in fact biological or even constant and mathematical, in fact mathematics has reached the heights of set theory in ZFC but in fact it just tells us that numbers have a certain perfect structure, which corresponds to biology in lived experience and is also physics stating gravity is a constant.

### II. Classification

I classify - mathematics is pure science which means pure infinites and so about the higher level of pure science which then becomes the natural science physics which is about gravity and the more elementary science biology which is about daily life.

Classification - mathematics (I) and physics (II) and biology (III) which is the Spinozan mode of how the highest becomes the smallest, or in fact the pure number becomes existential biological number. This hierarchy of sciences is finally the hierarchy of pure, daily life. One might argue that the purity of number is classified as pure but the purity of experience and existentialism is finally less pure numbers called biological numbers - which also means the three sciences correspond to a syllabus on science in schools - science is physics, biology and mathematics.

### III. Humanities versus Science as Wrong but in fact Humanities part of Science

The plastic nature of humanities then with science, this porous boundary that has to be marked and remarked till of course the humanities is finally relevant to the sciences - like the lecture on Philosophy as Epigenetics and even Stem Cell as relevant to philosophy.
